

We are celebrating three years since the first OneID certificate was issued

Today, KIBS AD Skopje marks three years since the issuance of the first OneID qualified certificate under the KibsTrust brand. With this big step in the process of digital transformation in the Republic of Macedonia, the company has started the path towards modernization of services and opened the door to new opportunities for citizens to use digital services.

Over the past three years, the number of OneID users has reached 25,000, representing a strong network of partnerships with a number of banks, financial and insurance companies, as well as leasing companies and other relevant entities. This is a strong confirmation that the process of educating and establishing the basics of using electronic identity and remote signing has been successfully completed, and the mass adoption phase is already a reality.

OneID is a fast, green, and secure tool that significantly improves the user experience. With OneID, the user can identify themselves using their mobile phone and get easy access to the services anytime and anywhere. OneID simplifies authorization of bank accounts, insurance services, and online transactions, while enabling the rapid creation of digitally signed contracts and requests, without the need for printing or scanning. In simple words, with OneID, long queues and physical presence at counters are already part of our experience from the past.
